Lab 7

Assignment 1

- Install and configure JSON Server to manage different types of data: users, product categories, and products.
- The database resources (endpoints) should be named **users**, **categories**, and **products**, respectively.

Assignment 2

Complete the “Login” feature.

- Retrieve the **username** and **password** from the login form,
- Validate the credentials, and update the authentication state using `useState`,
- Share the user data across the application via **useContext**.

Assignment 3

Complete the product category management features.

- Require user confirmation before deleting an item.
- Use both the **Fetch** and **Axios** to send requests to JSON Server.

Assignment 4

Complete the **product management** features.

- Require user confirmation before deleting an item.
- Use both the **Fetch** or **Axios** to send requests to JSON Server.
