Lab 8

Assignment 1

- Build a reusable **DataTable** Component to display various of data list.
- Integrate the component to display the category and product lists within the dashboard.

Assignment 2

Install Jest and use it to test some simple functions using the `toBe()`, `toThrow()` matchers.

Requirement:

Write unit tests for the following core logic functions to ensure data integrity and system reliability.

1. Calculate Total Inventory Value:

- Write a function `calculateInventoryValue(products)` that takes an array of product objects and returns the total value.
- **Test Case:** Use `toBe()` to verify the total sum and handle empty arrays.

Assignment 2

2. Filter Products by Category:

- Write a function `filterByCategory(products, categoryId)` that returns a subset of products matching the given ID.
- **Test Case:** Use `toEqual()` to perform a deep comparison of the resulting array.

3. Data Validation:

- Write a function `validateProductPrice(price)` that returns `true` if the price is greater than 0, and throws an error otherwise.
- **Test Case:** Use `toThrow()` to ensure the application correctly catches invalid inputs.

Assignment 3

Complete the order management features with the following requirements:

- ✓ Users can view general order information and order details.
- ✓ Users can update the order status (e.g., Pending, Shipped, Delivered).
